

SERVICE BRIEF

IT for Accountants

Virtual Business Solutions offers technology solutions to meet the needs of today's money managers.

Tools to Assist Accountants

Technology to enable accountants to better manage a business' funds.

Accountants are some of the most important people associated with a business; responsible for the collection, accuracy, analysis, recording, and presentation of a business' financial operation. Balancing a ledger, the use of today's most dynamic cloud-based resources can present many benefits for accountants.

Accountants use many of the same technologies that your administrative employees use. Various devices, productivity suites, cloud platforms, and security solutions are necessary to properly manage your business' money, and protect it from the problems caused by today's near ubiquitous access to information. At Virtual Business Solutions, we offer a full cache of solutions to improve the efficiency, and security, of your accounting practice.

Managed Services for Accountants

We have expert IT professionals on staff with the technical expertise to find the right solutions for your IT needs.

At Virtual Business Solutions, we provide value through the dissemination of comprehensive technology support, proactive monitoring and maintenance, and other solutions that aim to help you build a more efficient business. Our expert technicians are not only trained in the industry's best practices, they also understand the role that data security plays for the modern business. In order to provide businesses the technology support they expect, we leverage some of today's best solutions to ensure that client information is protected, also monitoring and maintaining an accountant's servers to

ensure that their infrastructure and network are proactively protected and working optimally.

Cloud Computing for Accountants

Cloud-based productivity, security, and communication solutions for accountants.

As the cloud continues to revolutionize business, accountants have to be mindful of how to properly leverage these exciting technologies. One consideration that accountants need to make is if the advantages of using cloud computing platforms—including co-located virtual environments—work for their purposes. The functionality accountants need is here, but it depends on the expectations their clients have, and if they are subject to outside regulations.

Regulatory Needs

Meeting regulatory compliance standards is important for any industry.

Accountants are often held to the Sarbanes-Oxley Act, which states that management is accountable for maintaining internal controls and procedures that foster accurate reporting. If your organization needs to meet SOX Act compliance standards, we can expertly design and propose changes your organization can make to its IT to help promote secure and reliable transfer of financial information.

Features

- Email
- Productivity Software
