

SERVICE BRIEF

IT For Education

Utilize today's technology solutions to educate the professionals of tomorrow.

Technology for the Classroom

We can help your school leverage its IT assets into a dynamic workplace and learning experience for your educators and students.

The use of technology in education keeps improving every year. The more that educators depend on technology solutions to provide their students with the newest technology solutions, the more cost effective support they will need.

At Virtual Business Solutions, we understand that every academic institution has unique challenges they face to provide their students with an education that they can use to be productive members of society. With all types of hardware, software, networking, and other IT-related products, as well as Metairie's most knowledgeable IT professionals, Virtual Business Solutions is your one-stop shop for all of your educational technology needs.

Education is Changing, Schools Need To Change With It.

The implementation of dynamic computing solutions can advance students' educations exponentially.

We believe that knowledge is indispensable. That is why our IT technicians are versed in the design, deployment, and support of information systems that work for all types of learning environments. From our ICT suite design program, to our knowledge in implementing both physical and virtual centralized computing platforms, to our relationships with companies that can provide dynamic peripherals, Virtual Business Solutions can make teaching—and learning—much easier.

It's proven that students often benefit from a hands-on approach to learning. With some of the same technology we often make available for Metairie businesses, you can leverage advances in IT to present powerful and interactive learning corridors. Our services include:

- *IT and Bandwidth Consulting* - Our IT professionals help your organization find the IT services you need to produce results, within your budgetary constraints.
- *Hardware and Software Procurement* - With our multitude of vendor relationships, we provide access to hardware and software solutions, and deploy them efficiently.
- *IT Support* - We have a full cache of support services, including Help Desk and Remote Monitoring, that can allow your on-campus IT department the freedom to innovate, without continuous support taking up resources and time.
- *Mobile Device Integration* - Understanding that mobile devices can be both beneficial and detrimental, we can help you determine what mobile policies work best for your school.

Features

- IT and Bandwidth Consulting
- Hardware and Software Procurement
- IT Support
- Mobile Device Integration

Benefits

- Be able to leverage the technologies that will best help your students learn.
- Assistance in selecting the services that will produce results while remaining in your budgetary limits.
- Efficiently deployed hardware and software solutions that allow students and educators to make the most of their time in school.
- Freedom for your on-campus IT team to focus on innovation, without the distraction of maintenance activities.
- Design and delivery of mobile device policies that allow these tools to be used productively, while reducing their status as a classroom distraction.
